<https://github.com/mtreinish/dirty-clouds-done-dirt-cheap>

Building a Cloud

Scope of the Project

- ▶ Pretend to be a sysadmin with no prior OpenStack knowledge
- ▶ Try to rely only on install docs and google searches
- ▶ \$1500 USD Budget
- ▶ Build a basic compute cloud:
 - ▶ Keystone
 - ▶ Glance
 - ▶ Nova
 - ▶ Neutron
- ▶ Install from Ocata from tarballs
- ▶ No automation or pre-existing install scripts

Buying Hardware

- ▶ Maximize core count per USD
- ▶ Second priority is amount of RAM per core
- ▶ Machines don't need to be fast (that costs money!)

ebaytm

The Servers

Model	PowerEdge R610
Processor	2x Intel Xeon E5540
Memory Installed	32GB Total Memory; 8 x 4 GB DDR3
Hard Drives	2x 146GB 10K SAS Hard Drive
RAID Controller	Dell PowerEdge R610 Perc 6i
Ethernet	2x Dual Port Embedded Broadcom NetXtreme II 5709c
Return Policy/Warranty	60 days Money Back Or Exchange

\$215 Each!!

Quirks with the servers

- ▶ Super stripped down:
 - ▶ No management interface
 - ▶ No redundant power supply
- ▶ Dead RAID controller battery
- ▶ Memory installed in wrong slots
- ▶ Came pre-installed with Windows Server 2012 (and default password Apple123)
- ▶ At full fan speed **>70 dB**

Assembling the Cloud

- ▶ Need something to hold the servers
- ▶ Traditional racks are too much money (even used)

LackRack

<https://wiki.eth0.nl/index.php/LackRack>

- ▶ Use a LACK side table from Ikea
- ▶ 19 inch width between legs
- ▶ Can fit 8U
- ▶ Lots of color choices
- ▶ \$9.99 USD

LACKRACK

Installing the Operating System

- ▶ Installed Ubuntu 16.04 LTS server
- ▶ Nothing special, stick with base packages

Installing OpenStack Services

1. Download service tarball
2. Create service users
3. Install binary requirements
4. Create service dirs in /etc and /var/lib
5. Copy etc/ from tarball into /etc/\$Service
6. pip install the tarball
7. Follow install guide on project configuration and setup

Setting Up Keystone

- ▶ 2 config options
- ▶ Install guide doesn't have instructions on apache wsgi app setup
- ▶ Google search found:
<https://docs.openstack.org/developer/keystone/apache-httpd.html>

KEYSTONE

an OpenStack Community Project

```

2017-03-29 15:27:01.478 26833 ERROR keystone Traceback (most recent call last):

      !=2.12.2,!=2.13.0,>=2.10.0'), set(['oslo.policy']))

```

Setting up Glance

- ▶ Straightforward configuration:
 - ▶ Auth
 - ▶ Image Directories
 - ▶ Database

GLANCE

an OpenStack Community Project

Don't forget to create glance store directory

```
glance-api[29623]: 2017-03-29 16:21:52.038 29647 ERROR glance.api.v2.image_data [req-8ff7f7d2-a4a5-4558-b5a9-9ecca139675f 20f283024ffd4bf4841a8d33bdb4f385 6 c3fc6392e0c487e85d57afe5a5ab2b7 - default default] Error in store configuration. Adding images to store is disabled.

.
```

Setting up Nova

- ▶ Database migrations are slower, took about 3mins
- ▶ Don't forget the placement API, no docs on apache setup
- ▶ novnc is problematic

NOVA

an OpenStack Community Project

Requirements

```
nova-api[1155]: 2017-03-29 18:33:11.433 1155 ERROR nova Traceback (most recent call last):

Setting Up Neutron

- ▶ Needed

NEUTRON

an OpenStack Community Project

Setting up Compute Nodes

Installation Pain Points

- ▶ Python Packaging:
 - ▶ Binary Dependencies
 - ▶ etc files (and any data files)
 - ▶ No dependency solver, always use upper constraints
- ▶ Debugging OpenStack requires a high level of competence

What to do with your budget cloud?

OpenStack Development

- ▶ Lots of capacity for running devstack
- ▶ A really good platform to develop and test OpenStack applications
- ▶

Cloud Native Compute Workloads

- ▶ <https://github.com/mtreinish/handbrakecloud>

Virtualized Infrastructure

Making OpenStack Better for Small Deployments

- ▶ 5x 1U Servers in your bedroom closet is not pleasant
- ▶ The power bill
- ▶

Where to get more information

- ▶ openstack-dev ML openstack-dev@lists.openstack.org

Questions?
